PROFESSIONAL SUMMARY

Game Programmer specializing in Core Engine Systems and Backend Architecture. My technical focus dictates programming performant player mechanics, custom logic, and physics integrations using Unity (C#) and Unreal Engine (C++). Leveraging a strong software engineering foundation, I architect robust backend systems in Java, build efficient infrastructure data pipelines, and develop AI agents via Python, consistently prioritizing clean architecture and stability.

WORK EXPERIENCE

Software Engineering Intern

Oct 2025 – Jun 2026

Reltio

Lisbon, Portugal (Hybrid)

> Developed advanced software integrations and data pipelines, optimizing cloud infrastructure monitoring and reporting.
>
> - **AI Agent Architecture:** Engineered customized agents (Python, Google AI SDK) to autonomously analyze metrics and draft complex technical reports regarding operational Cloud costs.
> - **MCP Tooling & Automation:** Built a proprietary Model Context Protocol (MCP) tool to generate targeted dashboards, fundamentally streamlining weekly data analysis meetings.
> - **Pipeline Optimization:** Refactored core internal infrastructure data pipelines in Java, heavily reducing processing time and ensuring stable, high-accuracy data flows.

Software Development Intern

Sep 2022 – Oct 2022

Happy Code

Cascais, Portugal (On-site)

> Instructed core software development logic while collaborating with internal engineering teams to build operational tools.
>
> - **Game Logic Instruction:** Guided students through core programming paradigms, algorithms, and applied video game logic via educational frameworks.
> - **Backend Tooling:** Partnered with the development team to maintain and expand internal operating tools, delivering robust backend capabilities that optimized ongoing workflows.

EDUCATION

BSc Games Development

Sep 2022 – Jul 2025

IADE - European University

Lisbon, Portugal

> Engaged in an intensive Project-Based Learning (PBL) curriculum, operating in multidisciplinary teams to develop and ship a complete core game or software application every semester.
>
> - **Gameplay & Mechanics:** Programmed complex player systems, custom combat mechanics, and AI behavioral state machines using Unity (C#) and Unreal Engine (C++).
> - **System Architecture:** Integrated engine gameplay loops with modern backend architectures, applying RESTful APIs and real-time networking flows.
> - **Optimization & Engine Core:** Studied Applied Mathematics, Data Structures, and Engine Development, explicitly prioritizing memory optimization and scalable code.

Professional Course in Software Development

2019 – 2022

Escola Secundária Matilde Rosa Araújo

Cascais, Portugal

> Acquired practical foundations in Java, Node.js, C#, MySQL, and backend security. Built a capstone project featuring a complete server system with secure authentication and efficient API communication. Final grade: 15/20.

TECHNICAL SKILLS

Game Engines & Core

- Unity / C#
- Unreal Engine / C++
- Game Engine Architecture
- Physics & Memory Optimization

Backend & Systems

- Java & Python
- Node.js / Express
- SQL (MySQL) & Databases
- Data Pipelines & Automation

Web & Infrastructure

- React & Tailwind CSS
- Docker & Containerization
- Git / GitHub / Version Control
- Model Context Protocol (MCP)

AI & Methodologies

- AI Agents / Google AI SDK
- AI Tooling (Cursor, Claude, MCP)
- System Design & Microservices
- Concurrency & Optimization
- Agile Methodology

LANGUAGES

Portuguese: Native

English: Professional (C1 Listening · B2 Speaking, Reading, Writing)
