PROFESSIONAL SUMMARY

I am a Software Engineer specializing in Backend Architectures and Game Systems. With a degree in Games Development, I bridge the gap between complex logic and seamless user experiences. My expertise lies in building robust data pipelines, orchestrating AI agents using Python & Google AI SDK, and designing efficient core systems in Java. I also have deep experience developing intelligent game mechanics using Unity (C#) and Unreal Engine (C++). Whether writing highly concurrent backend services or optimizing memory allocations for a game engine, I prioritize clean architectural patterns, maintainability, and absolute performance.

WORK EXPERIENCE

Software Engineering Intern — Oct 2025 – Jun 2026

Reltio — Lisbon, Portugal (Hybrid)

- Developed custom AI agents utilizing Google AI SDK and Python for analyzing, generating cost reports, and answering complex inquiries related to operational costs.
- Built a Model Context Protocol (MCP) tool in Python to automate dashboard generation and streamline weekly cloud cost analysis.
- Optimized the company's internal metrics collection systems and data pipelines using Java, improving performance and accuracy.

Software Development Intern — Sep 2022 – Oct 2022

Happy Code — Cascais, Portugal (On-site)

- Guided students through fundamental programming concepts and game logic using customized educational platforms.
- Collaborated with the internal team to maintain operational tools and developed robust backend functionalities that improved internal project workflows.

EDUCATION

BSc Games Development

Sep 2022 – Jul 2025

IADE - European University

Lisbon, Portugal

> Focused intensely on game design, advanced Unity programming, Artificial Intelligence systems, and collaborative agile teamwork projects. Designed and developed complex gameplay systems seamlessly integrated with modern backend environments using RESTful APIs and real-time data flows.

Professional Course in Software Development

2019 – 2022

Escola Secundária Matilde Rosa Araújo

Cascais, Portugal

> Acquired strong practical foundations in Java, Node.js, C#, MySQL, and backend security protocols. Orchestrated a capstone final project involving a complete server system featuring secure authentication loops and efficient API communication architectures. Final grade: 15/20.

TECHNICAL SKILLS

Backend & Systems

- Java & Python
- Node.js / Express
- SQL (MySQL) & Databases
- Data Pipelines & Automation

Game Engines & Core

- Unity / C#
- Unreal Engine / C++
- Game Engine Architecture
- Physics & Memory Optimization

Web & Infrastructure

- React & Tailwind CSS
- Docker & Containerization
- Git / GitHub / Version Control
- Model Context Protocol (MCP)

AI & Methodologies

- AI Agents / Google AI SDK
- AI Tooling (Cursor, Claude, MCP)
- System Design & Microservices
- Concurrency & Optimization
- Agile Methodology

LANGUAGES

Portuguese: Native

English: Professional (C1 Listening · B2 Speaking, Reading, Writing)
